Let  $f(n) = \sum_{i=1}^n 1$  What is the complexity of  $f$ ? I know that  $f$  is a polynomial function but I don't know what to do when given an O notation. Can you please help? A: The recurrence relation  $f(n) = f(n-1) + 1$  can be written out as  $f(n) = f(n-1) + n$  in O-notation. Now, you are free to combine the two terms in the summation to get  $f(n) = \sum_{i=1}^{n-1} f(i) + n = \sum_{i=1}^{n-1} f(i) + \sum_{i=1}^{n-1} i = \left(f(1) + 1\right) + \sum_{i=2}^n i = 1 + \frac{n(n+1)}{2} = O(n^2)$  because that last sum is a geometric series. Innovative thermoresolution of erythrocytes for the quantification of anaemia markers in newborns of mothers with  $\beta$ -thalassaemia. Blood samples from healthy newborns of  $\beta$ -thalassaemia carriers and from non-carriers were treated with an innovative heating stage for the quantification of erythrocyte indices of haemoglobin content (Hb) and haematocrit (Hct), the cells being assayed by flow cytometry and chemiluminescence methods. Two different approaches for the heating were tested: a traditional dry bath and a novel closed-loop thermostatic cooling system combined with a forced convection. Both the traditional and the innovative procedures delivered comparable results in terms of the precision and accuracy of the measurements. Data obtained from two different methods showed that Hb and Hct values, expressed as a ratio to the corresponding values from healthy, non-
